EDUCATION

Prestige Institute of Engineering Management and Research — B.Tech, CSE-IoT

2023 – 2027

CGPA: 7.39

12th, MP Board (2021): 84.4% | 10th, MP Board (2019): 84.6%

ACHIEVEMENTS

- Winner, Smart Indore Hackathon — “Mechanic On Call”
- Smart Innovation Award, Prayatna 3.0 Hackathon — Real-Time Hospital Resource Sharing System
- Smart Innovation Award, AI Manthan Hackathon — Crowdsourced Civic Issue Reporting System

TECHNICAL SKILLS

Languages: C, C++, Python

Web & Backend: HTML5, CSS3, React.js, Next.js, WebSocket

Databases: MySQL, MongoDB

Tools: Git, GitHub, VS Code, Linux, Figma

EXPERIENCE

Cyber Security Intern — Office of Additional DCP, Crime Branch, Indore

Dec 2025 – Jan 2026

- Filed and documented citizen-reported cybercrime cases on the National Cyber Crime Reporting Portal (cybercrime.gov.in), identifying fraud types and digital attack patterns for each case
- Reviewed digital evidence handling and investigation procedures on live cases, and researched phishing and social-engineering techniques seen in active fraud reports

PROJECTS

Mechanic On Call — Winner, Smart Indore Hackathon

5-hour build

React.js, Django, REST API, GPS Integration

- Built a service connecting stranded vehicle owners with nearby mechanics using GPS-based proximity matching, so users can raise an on-demand assistance request instead of searching manually
- Won 1st place among all teams at the hackathon for the concept and working prototype

Crowdsourced Civic Issue Reporting System with IoT Automation

5 months

React.js, Django, Firebase, ESP32, HC-SR04 Ultrasonic Sensor

- Built a citizen-facing app for reporting civic issues (potholes, garbage, streetlight failures), with Firebase storing and syncing submitted reports to the authority-facing dashboard
- Added IoT-based automation using an HC-SR04 ultrasonic sensor on an ESP32 to measure garbage bin fill level and auto-generate a report once it crosses a set threshold, without waiting on a citizen to submit one
- Built a dashboard for authorities to view and update the status of both citizen-submitted and sensor-triggered reports

Real-Time Hospital Resource Sharing System

36-hour hackathon

React.js, Node.js, WebSockets, MongoDB

- Built a real-time platform for hospitals to publish live availability of beds, oxygen, and ambulances, letting patients and staff see current status instead of calling around
- Chose WebSockets over polling so any update to resource availability pushes to every connected client immediately, avoiding the delay of a fixed refresh interval
